EDUCATION

Ramkhamhaeng University Bachelor of Computer Science

December 2021 - Expected Graduation on December 2025

LICENSES & CERTIFICATION

Junior Software Developer Cohort 8 - Participated

Generation TH

Super AI Engineer : AI Developer - Participated

AIAT(สมาคมปัญญาประดิษฐ์ประเทศไทย)

other

SKILL

Programming Languages & Frameworks

Python , JavaScript , TypeScript , GO, Express, ReactJS, Fiber, Langchain

Database

mySQL, MongoDB, Faiss, Qdrant

Tools

Docker, Jenkin, Git

Others

Linux, Amazon web service(AWS), Google Cloud Platform(GCP), Vercel, Render

EXPERIENCE

Backend Developer - Aiden lab : March 2025 - September 2025

As a Backend Developer at Aiden Lab, I work on the Aiden Lab AI platform and Lunar AI, focusing on scalable backend architecture and API optimization. I contribute to developing a RAG chatbot to enhance research accessibility. I also support frontend development using React and Next.js. My role includes deploying services via Docker and CI/CD pipelines. I ensure system performance, scalability, and reliability across the platform.

Software Developer - Generation Thailand : September 2024 - December 2024

I worked with a team of 4 on a 4 month e-commerce project, gaining hands-on experience in software development, version control, and agile methodologies. I designed an admin interface for efficient inventory management and developed a robust backend system. Additionally, I built and deployed a chatbot to enhance user engagement for thousands of customers.

AI Engineer - BAAC(Bank for Agriculture and Agricultural Co-operatives) : August 2024 - October 2024

I developed a RAG chatbot for internal information retrieval using FAISS, OpenSearch, and LangChain over a 3 month period. I also built a fast, efficient document search engine with vector embeddings and designed a responsive web app using React for chatbot and search functionality. To streamline development, I set up a CI/CD pipeline with GitLab CI and deployed scalable, consistent Docker containers for production. The project included 2 prototypes and now serves 14,000 employees at the headquarters.

IT Part time - Pun center : 2022 - March 2025

Since 2022, I've worked part-time as an IT Manager at Pun Center, managing WordPress sites, troubleshooting, and providing tech support. I also volunteer at Debsirin School, teaching AI and WordPress, and offer IT lectures and one-on-one tutoring.

Graphic designer freelance - Breakfast studio : 2018-2024

I worked as a freelance graphic designer from 2018 to 2024

AWARD

1 th Runner Up Brain Motor Imagery Classification onsite hackathon out of 170+ people participating. : Winner

AIAT - Super AI Engineer SS4 Hackathon

10 th place Signal Processing: Sleep Stages Classification onsite hackathon out of 170+ people participating.

AIAT - Super AI Engineer SS4 Hackathon

7 th place Human Activity Recognition (HAR) Hackathon onsite at mahidol university out of 90+ people participating. : Special reward

PROJECT

Aiden ai platform -Aiden lab : *March 2024 - September 2024*

Full-Stack Developer | AI Developer

As a Backend Developer at Aiden Lab, I work on the Aiden Lab AI platform and Lunar AI, focusing on scalable backend architecture and API optimization. I contribute to developing a RAG chatbot to enhance research accessibility. I also support frontend development using React and Next.js. My role includes deploying services via Docker and CI/CD pipelines. I ensure system performance, scalability, and reliability across the platform.

OrbitRex Living - Generation Thailand : *September 2024 - December 2024*

Full-Stack Developer | AI Engineer | DevOps

I worked as a Full-Stack Developer, AI Engineer, and DevOps in a team of 4 on an e-commerce project called OrbitRex Living. My primary responsibilities included developing and maintaining the backend for both the shop site and the admin site using modern web technologies. I also designed and deployed the backend and frontend admin panel to cloud infrastructure, ensuring scalability and security. Additionally, I built and integrated an AI-powered chatbot for the shop site to enhance user experience and provide automated customer support, while my teammates handled the frontend development of the shop site.

Welf Assit Smart Chatbot Platform - BAAC(Bank for Agriculture and Agricultural Co-operatives) : *August 2024 - October 2024*

Full-Stack Developer | AI Engineer | DevOps

I developed a RAG (Retrieval-Augmented Generation) chatbot for internal information retrieval at BAAC, using FAISS, OpenSearch, and LangChain over a 3-month period. This chatbot allows employees to easily access organizational information. I also built a fast and efficient document search engine with vector embeddings to enhance the chatbot's accuracy and performance. For the user interface, I designed a responsive web app using React to integrate chatbot and search functionalities seamlessly. To streamline development, I set up a CI/CD pipeline with GitLab CI, automating deployment and ensuring a consistent, scalable production environment using Docker containers. The project included two prototypes and now serves over 14,000 employees at BAAC's headquarters. This project was showcased at the AI Forum 2024 with a poster titled "Welf Assist Smart Chatbot Platform for Employees." You can view the poster here: [Welf Assist Poster](#).

ACTIVITY

Super AI Startup Pitching Final

AI Thailand Forum 2024 by AIAT

I participated as a Project Manager & Developer in this hackathon, where my team pitched a solution to develop a carbon credit platform for Thai farmers. Our project aimed to leverage AI and blockchain technology to help farmers generate and trade carbon credits efficiently.

Hackathon: AI for Human Activity Recognition in Wellness Management

Mahidol University | July 13-14, 2024

I participated in this signal processing hackathon, where my team developed an AI model for human activity recognition in wellness management. Our innovative approach earned us a special award for outstanding performance in the competition.

Hackathon: Super AI Engineer SS4

AIAT | January - December, 2024

Home Credit - Credit Risk Modeling, Legal Act Classification, Signal Processing: Sleep Stages Classification, Thai Language Image Captioning, Liver Ultrasound Detection, Ultra Wide Band Pose Prediction, Nithan Chadok Name Entity Recognition, Farm Connect - Soil Water Content Prediction, Forest Type Classification, IoTs and Robotics: Temperature Prediction, Data Science: Car Prediction, Computer Vision: License Plate Recognition, Nithan Chadok Hybrid OCR-NER, NLP: Nithan Chadok Hybrid OCR-NER, Image Search.
